Our domain of knowledge

CREWES
Data Science
Initiative

Types of Projects

Short-term:

1 to 4
months

POC (proof of concept)
Student/industry training

Mid-term:

5 to 12
months

Thesis chapter(s)
Publications

Long-term:

1+ years

Thesis
Publications

People

All CREWES grad
students and staff*

Courses

- Basic Programming
 - ✓ Python
 - ✓ R
 - ✓ MatLab
- ML Programming
 - ✓ General cases
- Custom ML Programming
 - ✓ Sponsor specific
- Mentorship

YOU GET A MACHINE LEARNING

**EVERYONE GETS A
MACHINE LEARNING**

YOU GET A MACHINE LEARNING

2019 Projects

Machine Learning as a Tool to Predict the Mass of Oil from Well Logs

Marcelo Guarido and Daniel Trad

Predicting Mass of Oil

Wireline logs

Core Analysis

Predicting Mass of Oil

Using Natural Language Processing and Machine Learning to Predict Severe Injuries Classification in the Oil and Gas Industry

Marcelo Guarido and Daniel Trad

Injury	Part of the Body	Description
Fractures	Lower leg(s)	Three correctional facility guards were escorting a restrained federal prison inmate when he became disruptive, requiring the use of force. Two guards and the inmate fell onto the Lieutenant's right leg, fracturing his fibula. He was transported to the hospital and released the following day.

TF-IDF (Term Frequency-Inverse Document Frequency)

Common locally:

$$TF(t, d) = f_{t,d}$$

Global rarity:

$$IDF(t) = \log\left(\frac{N}{1+n_t}\right)$$

$$TF-IDF(t, d) = f_{t,d} \cdot \log\left(\frac{N}{1+n_t}\right)$$

Severe Injuries

Top 10 Injuries (all industries)

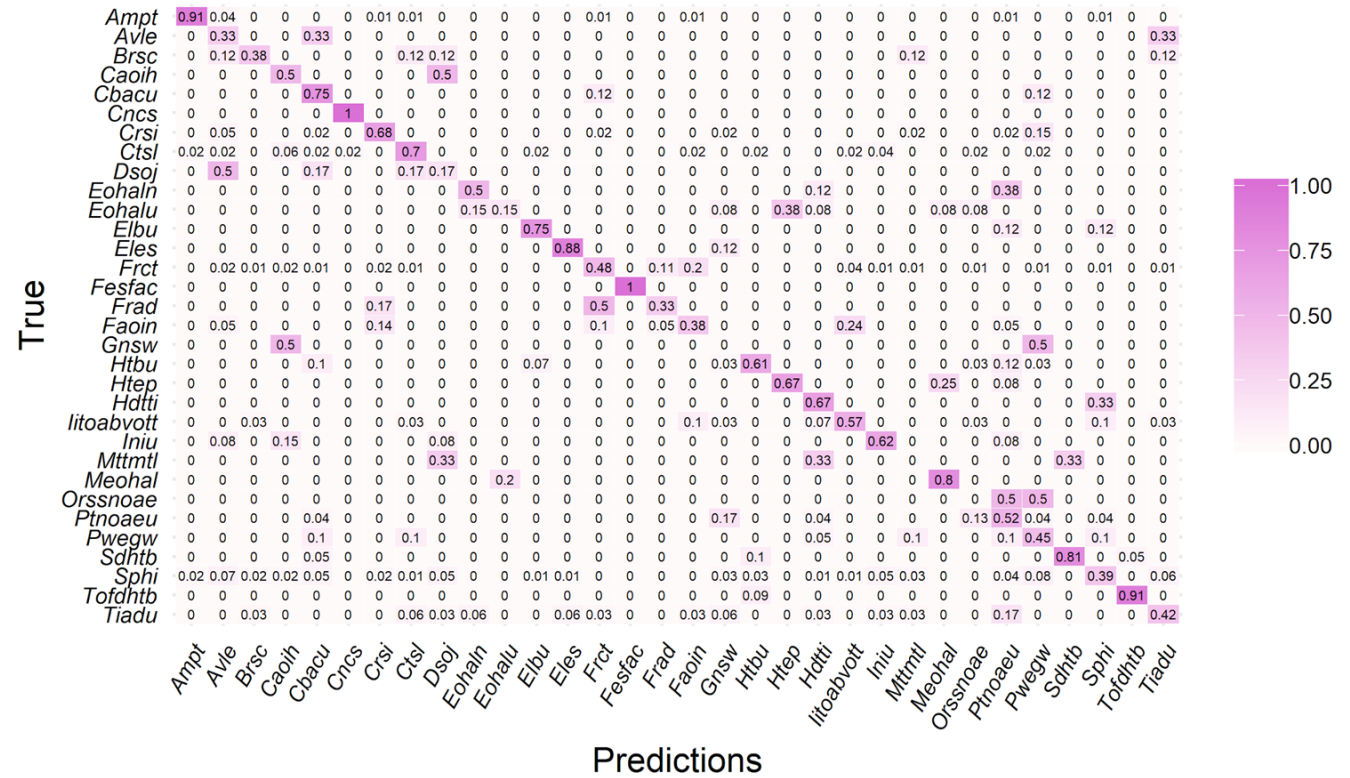

Top 10 Injuries (Oil&Gas industry)

Confusion Matrix: Relative Values

Model: Logistic Regression (Balanced) Accuracy: 0.634 Balanced Accuracy: 0.541
